

Simulation Report

DUE date on web site

Divide your report into **six** sections, **with section headings**, and report on the following:

- 1) Describe your role in the software system development process.
- 2) *List* and briefly *describe* the things that went well throughout the process.
- 3) *List* and briefly *describe* the things that did not go well throughout the process.
 - 3a) After describing each point in 3 above, explain what **you** could have done to improve the situation.
 - 3b) After describing what you could have done (3a), explain what you think others could have done to improve the situation. Be specific.

Example:

- 1) This did not go well...
 - a) What you could have done....
 - b) What others could have done...
 - 2) This did not go well...
 - a) What you could have done....
 - b) What others could have done...
 - 3)
-
- 4) *List* and briefly *describe* the business/managerial issues that arose during the process. (Think back on all the MGMT classes you've taken.)
 - 5) *List* and briefly *describe* the things you learned from this simulation. In other words, what did you learn during this simulation that you will take into the workplace? Be specific.
 - 6) Conclude this report with the following: If you were given the chance to do the simulation over, summarize what **you** would do differently.
