How to start vncserver at boot

There are at least 2 approaches

- Method 1 (simplest)
  - Use raspi-config to start the desktop at boot
    - *sudo raspi-config* and select *Enable boot to Desktop*
  - Follow the directions in ***Running VNCServer at Startup*** to put autostart instructions in your .config directory
- Method 2 (described here)
  - Place a control script in the /etc/init.d directory
  - Enable dependency based boot sequencing with the command:

  update-rc.d /etc/init.d/vncboot defaults
