CSCI 331: Operating Systems I
meeting schedule for a couple of weeks

CSCI 331 will meet the following times and places in the weeks of January 28 through February 1 and February 4 through February 8:

- January 29, 3:05-4:20 Rhodes 217
- January 31, 3:05-4:20 Rhodes 217
- February 1, 3:15-4:30 Rhodes 223
- February 7, 3:05-4:20 Rhodes 217
- February 8, 3:15-4:30 Rhodes 223

The sessions in Rhodes 223 are special laboratory classes. In the Friday, February 1, we will create copies of the Minix operating system for everyone in the class, and then I will demonstrate how to start Minix on the PC clones in the lab. You must bring three 5.25 inch diskettes and one 3.5 inch diskette. Later in the semester you may need a couple of more diskettes. In order to speed up the process, I'd like for a few students to bring their diskettes to class on Thursday, January 31, so I can create a few `seed' diskettes. I suspect it will take about 15 minutes to create the copies, so don't be overconcerned about getting to class at exactly 3:15.

You'll be given a Minix programming assignment after the lab on February 1. In the lab on the following week (February 8), we will look at some of the Minix utilities.

You should read Appendixes C and D of the textbook before the labs. Otherwise, you'll probably delete a file by mistake and end your budding career as a computer scientist.
